

Installing Univents with the W07 Mounting Bracket

The W07 mounting bracket for Grow More greenhouses allows you to easily mount the Univent openers to the Grow More roof vents. It has a set of 2 holes on each side of the bracket. The side with holes slightly further apart will line up with the holes on the greenhouse vent. Use the Z04 screws included with the greenhouse to fasten the bracket to the roof vent as shown in the picture below. Then mount the Univent opener to the other set of holes on the W07 bracket. Use the hardware included with the Univent (shown at right) to fasten it to the W07 bracket.

The bottom arm of the Univent will be secured to the inside channel of the greenhouse frame (piece L04 shown at right). This is the same part that the W08 manual opener support brackets are mounted to. Remove the W08 bracket, and use the S01/M01 hardware from it to secure the sill bracket of the Univent to the greenhouse frame. The W08 brackets W06 manual openers are no longer needed.

If you have not already, install the black power cylinder by screwing the threaded part of the cylinder into the cylinder housing on the opener as shown in Fig. 3 below. Make sure the rod inside the power cylinder inserts into the T clutch when threading the cylinder into the Univent as shown in Fig. 1 below. Raise the upper arms (Arm K) as needed to create enough space for the rod to slide in the T clutch. Then line up the hole in the tip of the rod with the bottom hole in the T clutch. Insert hairpin through holes to secure.
