

Multi-Wall Polycarbonate Cleaning Tips

The UV-resistant surface treatment on one side of the polycarbonate sheet significantly improves long-term weatherability. Periodic cleaning using proper procedures and compatible cleaners is recommended to prolong the service life. For general cleaning, it is recommended that the following instructions and cleaning agents be used. These procedures and cleaners are also recommended for use on the untreated, interior surface of the polycarbonate sheet, and for acrylic and APET plastics.

CLEANING PROCEDURES

1. Rinse sheet with lukewarm water.
2. Wash sheet with a mild soap and lukewarm water.
3. Use a soft cloth or sponge and gently wash to loosen remaining dirt and grime.

DO NOT SCRUB or use brushes or squeegees.

The coating on polycarbonate sheets is UV-resistant; IT IS NOT A MAR-RESISTANT COATING.

4. Repeat rinse and dry with a soft cloth to prevent water spotting.

Cleaning Agents that have been found to be **COMPATIBLE** with polycarbonate sheets:

Acetic Acid (vinegar)
Ammonium Chloride
Antimony Chloride
Borax in H₂O
Butane
Calcium Chloride
Calcium Hypochloride
Carbon Dioxide

Carbon Monoxide
Citric Acid 10% (moldzyme)
Copper Sulphate
Ethyl Alcohol 95%
Ethylene Glycol
Formaline 10%
Hydrochloric Acid 20%
Hydrofluoric Acid 5%

IMPORTANT: Compatible performance is no guarantee that actual end-use conditions have been duplicated. Therefore, these results should be used as a guide only and the products must be tested under actual end-use conditions by the user.

CAUTION! The Multi-Wall Panels must be stored in a cool, dry location. If stored in the sun, the temporary protective film will be difficult or impossible to remove. Leave film on until after installation is complete (one side must face out).
